

Dear Customer:

Thank you for ordering these unique Rolling Bike Hangers. These hangers can be used to hang bikes 1 wheel at a time or 2 at a time. They are also great for hanging up garage items like leaf blowers, weed wackers, hedge trimmers, chainsaws and more!

These rolling hangers are made to work with 1"-5/8" x 1" 5/8" strut channel which should be easy to obtain in your local area at stores like Home Depot and Ace Hardware (Typically in the electrical department). You may see trade names like Super-Strut and Unistrut. Not Sure? Contact us and we can arrange a drop shipment to your address.

Installation video

The customer will need the following materials which can be obtained at most hardware stores or as a kit from the GearBlocks store.

- 1"-5/8" x 1" 5/8" - 12 Ga Strut Channel (10' length / cut to required length)
- Lag Screws (Low profile like Spax 5/16" x 3in or similar) at least 3 per Channel
- Flat washer 1/4" x 1", 1 per channel Lag Screw

Installation:

- You should be pretty handy, and able to use tools and find the studs in your ceiling.
- Place your lag screws about 2 feet from each end of the strut channel and 1 in the center (approximate based on your stud spacing) and secure in wooden stud.
- Insert rolling hangers
- Add end stops (User may supply cross drill bolt as stopper or purchase additional stoppers from shop.gear-blocks.com)
- Some ceilings may not be perfectly level. Use a level to determine which end should go down and install a small wood shim to correct and prevent bikes from rolling to one end.

WARNING

- Stay within the rating of the hook
